

The **Buffalo Association of Professional Geologists** presents:

## ***Exploring New York: Little Rock City***

An educational day filled with the exploration of some of New York's coolest geology. Little Rock City is one of several areas in Cattaraugus County displaying a quartz conglomerate which is 300 million years old. There is a one mile long self-guided hiking trail where the conglomerate can be explored. Some of the outcrop reaches up to 60 feet tall! We will meet around 10 am to start the hike, have a picnic lunch, and finish up the afternoon with more hiking and exploring. BAPG will provide refreshments.

### **Where:**

Little Rock City  
Little Rock City Rd  
Little Valley, New York 14755  
Admission: Free

### **When:**

September 28th  
10:00 AM – 3:00 PM
